

ABSTRACT OF THE DISCLOSURE

SA 7 1 A communication method includes the steps of: a)  
transmitting an ACK signal indicating a received packet  
includes no error or a NACK signal indicating the received  
5 packet includes error from a reception end to a  
transmission end, and performing automatic repeat request;  
b) obtaining reliability of the received packet when  
demodulating it at the reception end; and c) reporting  
from the reception end to the transmission end the  
10 reliability of the received packet utilizing the ACK/NACK  
signal by using not less than three levels.
